

Spendy: Your Expenditure Partner

National Agentic AI Hackathon 2025 – Track 2

Leader Name: **Ahmad Ali**

Team: **Team A²**

Our Idea

Spendy is a simple **finance tracker** that helps users record expenses and income, categorize transactions, and view statistics. The app focuses on simplicity and smooth design. By combining accessibility with trust, it empowers people to build stronger money habits in Pakistan.

How We Tackled the Problem

Money management is a major challenge in Pakistan. We're never taught how to manage money properly. Even BBA students struggle with this, even though their majors are in money management. **As a student myself, I observed this challenge.**

What Makes It Innovative

Spendy sleek design, simplicity, and upcoming advanced features such as **Notifications reading** — make it unique. In a future, after publishing the app on the Play Store, users will be able to use it locally on their mobile, with the option to sync data in real-time via Firebase for better control and convenience.

How Firebase Studio Helped

I'm a Flutter developer and a student of IT, so app building is part of my profession. Firebase Studio helped me build the app **in days instead of months, which is a huge plus**. But it still needs improvements in some areas like:

- Giving more control to users during prototyping.
- Better data handling, and smoother third-party integrations.
- Firebase Studio also has poor problem explanation. You can't rely only on prompts; some prior knowledge is needed.
